Office Action Summary

Art Unit: 3744

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 3,4 are rejected under 35 U.S.C. 102(b) as being anticipated by Swan.

Swans shows a humidification system, in F1G, 2, where in two conducts 44 or 70 are selectively connected to an enclosed space via 70 & 72 during the winter or to the building exterior during the summer. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,2 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Swan, as applied above, in view of Freeman or Fleming et al. Both secondary references provide valving to allow selective in airflow in different directions. In order to carry out the flow arrangement of having two different conducts, it would have been obvious to provide a flow diverter valve at the function of 44 & 70 in Swan.
